[Professional recognition in the EU, the result of the effective involvement of the Romanian authorities. The dashboard of the Single Market positions Romania above the European average.](#)

The European Commission recently published the [Single Market Scoreboard](#) - 2020 edition, which highlights all Romania's indicators for 2019, including on Administrative Cooperation between Member States through the Internal Market Information System (IMI System) - the Professional Qualifications module.

The IMI module - coordinated by CNRED, within the Ministry of Education and Research, in relation to the competent authorities for regulated professions in Romania, universities and school inspectorates - contributes to the insertion of graduates in Romania on the EU labor market, by facilitating professional recognition of diplomas and their certificates.

The [country report](#), which presents the results of IMI performance indicators, shows:

*„Performance - **Romania maintained its excellent performance.***

Romania further improved its performance despite the very high volumes of incoming requests - Romania receives 13% of all requests sent through IMI.

All 5 (five) indicators showed performance above the EEA (European Economic Area) average.

On average Romania answered requests in 2 (two) weeks, 50% were answered within 1 (one) week.”

...

The graphical representation marks the evolution of IMI performance indicators in the last 3 (three) years, in the context of the increasing volume of managed information requests.
